

KeyMacro is a custom keyboard macro creator, which lets you create your own macros and record them. With this tool, you can make macros for any operations you like, including the creation of keyboard shortcuts. You can also create macros to modify specific text areas or draw an image on a selected area. KeyMacro supports the Microsoft Windows operating system, including Windows 7, Vista, XP, and 2000. KeyMacro provides the following features and tools. Create a Macro KeyMacro can be used to create macros on a selected key. You can select a trigger key that is used to execute a macro on a specified key. You can create macros for any operations you like, including the creation of keyboard shortcuts. You can create shortcuts to open or save files, or change the search engine on a web browser. You can create shortcuts to launch an application. You can also create macros to modify the selected text or a specific text area, to copy the selected text or a specific text area, to draw an image on a selected area, or to search Google using the custom search engine. Save or Load a Macro You can save a macro in the .mcr file format. When you add a new macro, KeyMacro automatically loads the macro. You can also save the .mcr file on your computer, and load it later. Import and Export You can import a .mcr file that you saved earlier, or you can import and export existing macros from the .mcr file to a .cfg file. You can export macros, so that you can create a new .mcr file, and import macros from a new .cfg file. Automatic Macro Key Type KeyMacro automatically detects the key type and the key positions of the macro, and stores the information in the macro. Powerful Tools KeyMacro has advanced tools that let you modify existing macros. You can use them to convert the macro from single key to multiple key shortcuts. You can also modify macros to work on the specified key. System Requirements Windows OS Windows 7, Vista, XP. 2000 300 MB of RAM 300 MB of free disk space 54 MB of hard disk space 1 GHz processor To learn more, you can read the Manual. Allowing users to quickly select and copy/paste hex values, and effectively view and insert them into files, the KEYMACRO plugin is a great tool to have in your word processor. The user interface is just as good as in HEX-Editor, with all functions available from the main menu. In terms of functionality, this plugin comes packed with all the benefits users have come to expect from Notepad++. In order to install this plugin, simply move the DLL file to Notepad++'s installed files, and enable it via "Plugins > Add Plugin." This product provides the following options: *Insert hex values: Clicking this button lets you easily insert hex values into your files. *Clear hex comparison results: Clicking this button clears the comparison results for hex values. *Compare hex values: Clicking this button lets you compare hex values. *Browse hex files: Clicking this button lets you browse a list of hex files. *Select hex values: Clicking this button lets you select hex values. *Clear hex selection: Clicking this button lets you clear all selected hex values. *Replace patterns: Clicking this button lets you replace hex values with new ones. Other options of KEYMACRO enable you to customize the layout as well as the font. You can also view file types to automatically open in hex view mode when loaded into the word processor. KEYMACRO does not burden the performance of Notepad++ in any way, nor does it hinder the basic application in any way. We have not come across any issues throughout our evaluation, since the plugin did not hang or crash. All in all, the KEYMACRO plugin is a useful tool to have in your word processor, given the plethora of useful options you can select from. VNCViewer is a VNC client for Windows. The most important features of the VNCViewer are that it can connect to multiple remote computers and remotely control them, it can display a large number of files simultaneously and it can be customized to make it easy to interact with the remote computer. The VNCViewer lets you control a remote computer by using your computer's keyboard and monitor. In addition, it lets you display a remote computer's desktop or window by using a window created on your computer's desktop. Once connected, you can control the remote computer's mouse and keyboard and watch the mouse movements and keystrokes on the remote computer's monitor.
