

This macro runs the command svc.exe to start and stop services. KEYMACRO Reference: The svc.exe command is a part of Windows 2000, XP, Vista, 2003, 2007, 2008, and 2012 (and older versions as well). To use this macro, you must be using a version of Windows that has the svc.exe command. If you don't have a copy of Windows installed, or don't have the Service Management Console (SMC) that allows you to control and monitor services, you can download the appropriate version of SMC from Microsoft. Instructions: Set up your svc.exe macro as follows. To Stop a service: In the macro editor, go to the line that says EXEC PROMPT In the line of svc.exe, add %SERVICE% %SERVICE% STOP To Start a service: In the macro editor, go to the line that says EXEC PROMPT In the line of svc.exe, add %SERVICE% %SERVICE% START Once your svc.exe macro is configured, you can start and stop services using the following commands: %SERVICE% %SERVICE% Start %SERVICE% %SERVICE% Stop The svc.exe command is available from the Start menu by going to Control Panel | Administrative Tools | Services Downloads... The following macro can help to troubleshoot poor performance when trying to access a web site from a network device (server/router/gateway/switch). To use this macro, you must be using a version of Windows that has Internet Connection Sharing (ICS). Instructions: 1. Download the macro to your desktop (where you will find a.txt file named ClientMacro.txt) 2. Open your macro editor and go to the line that says EXEC PROMPT 3. Insert your complete internet address where it says %URL% with all the sub-domains in the form of %URL.%URL% KEYMACRO Description: The following macro allows the user to launch a browser and navigate to a web site through a link that will perform a web crawl. Instructions: 1. Download the macro to your desktop (where you will find a.txt file named ClientMacro.txt) 2. Open your macro editor and go to the line that says EXEC PROMPT 3 70238732e0
