This is a Linux application that allows you to login to Outlook and use the network attached storage mounted to Outlook as a file system. Outlook can be run under KDE or GNOME. There is a configurator for how to configure the file system as well as a bash script to be used to start the program automatically at login. This is the only way to have your MDAemon Outlook folder on the network without using Microsoft Exchange Server. Download: KDE: Macports: GNOME: KDE: Macports: GNOME: OUTLOOK Connector for MDAemon Gnome KDE Macports MDAemon MDAEMO Outlook Connector for MDAemon MDAEMO Release Notes Version 2.0 * Fix for MDAemon versioning and some bugs Version 1.0.9 * Default profile is updated from MDAemon 1.0.8 * Fix for default settings for file system home and work directories * Fix for a bug with MDAemon requiring two or more login attempts Version 1.0.8 * Fix for path issue with shared network drive * Fix for CPU usage issue if you are using Firefox * Fix for a bug where there would be an unexpected CPU usage increase after logging in * Fix for general rounding errors * Fix for bug with copying more than ~100MB of files * Fix for bug where logout would corrupt MDAemon database * Fix for bug with sending spam emails * Fix for bug where sending email with vCards would not work * Fix for bug with file sharing that would cause files to be corrupted * Fix for bug with the
