
Epson Adjustment Program Epson Tx720wd -

OK, the printer is now working again. I was able to print a set of reports before the ink ran out. The adjustment program worked perfectly, and I am very relieved to know that the problem is now solved. At this point I am happy to report that I will not be purchasing an inkjet or getting a replacement inkjet anytime soon. I plan on keeping my printer for a long time to come. After getting the printer back to work after the reset was done, I noticed that the ink counter was still showing that there was plenty of ink left (it had been down to a few drops out of the 215). I checked the ink level and it was fine. I did a nozzle check and a head cleaning, no errors. I did a print job and ended up with a print job failure message from the printer. The job printed fine in the Epson software, so I deleted the print job and started up the printer again, and the print job succeeded! All was well with the printer again. I decided to do a print job and ended up with the same print job failure message. I did a nozzle check and the head cleaning again, no errors. This is a little weird because before I would print a page of the print job on one side of the page, but when I did the print job the second time, the print job succeeded, then the print job failure message. It doesn't make sense to me, but that is my experience with this printer and I have since sold my whole 5 to 6 toner set so I have no ink left to spare. I can't say much yet about Boot Camp except that I now have Windows 7 on my laptop, the machine I'll use to flush the R3000 with the Service Adjustment Program. Since I've never used Windows in the past, I'm proceeding slowly and cautiously. I need a Windows guru looking over my shoulder to keep me from screwing up. Guess I'll pick up a copy of Windows for Dummies.
